Matej Kozlovský

➢ Senior JavaScript/React Developer

➢ Medior UI/UX Designer

Personal information:

- Address: Azovská 2, 821 08 Bratislava
- Date of birth: 30. January 1988
- Phone number: +421 908 271 049
- E-mail: matejkozlovsky@gmail.com

Key skills:

- React
- React-native
- TypeScript
- JavaScript
- SQL (MYSQL, MS-SQL)
- HTML5
- UX
- Azure cloud
- Google cloud

- AWS
- .NET (C#)
- GraphQL
- Prisma
- CSS3
- NextJS
- Ant Design
- Chakra UI
- Material UI
- Vue

Recent work experience:

MAFRA Slovakia a.s. – TicketPortal Fan App
Date: 03/2023 - 06/2024
Duties: My duties were to create new function based on design draft from Figma and fix bugs found in testing. As well as create visually different versions of the app for different sports clubs. My specialization in this project was to create mobile version of library used by TicketPortal to render interactive venue with seats compatible with react-native and Expo.
Technologies: React-native, Expo, JavaScript, Node, i18next

Spectado s.r.o. – SLOVAN drafting front-end
Date: 09/2022 - 06/2024
Duties: Create visual draft of the application. Modified draft based on client's feedback. Create prototype and collect feedback. Make UI improvements and fix found bugs. Maintain client side of the application.
Technologies: React, JavaScript, Node, Bootstrap, SASS, Hetzner cloud hosting

Spectado s.r.o. - muj.dobryandel.cz
Date: 08/2022 - 06/2024
Duties: Maintenance and development of new features.
Technologies: React, JavaScript, Bootstrap, SASS, i18next, GraphQL, Hetzner cloud hosting

Spectado s.r.o. - LiveSport Streaming CMS
Date: 08/2022 - 06/2024
Duties: Maintenance and development of new features.
Technologies: React, JavaScript, Bootstrap, SASS, Hetzner cloud hosting

Denax a.s. – FRM email editor
Date: 01/2022 - 03/2023
Duties: Change email service provider to Maileon. Rebuild internal queuing system. Modify existing cloud function to use Maileon API to send campaign emails to specified email address list, as well as maintain and add new feature.
Technologies: React, JavaScript, Node, Firebase, Maileon-api, RabbitMQ. Googlr cloud

Denax a.s. – GoTicket – Venue Editor – WYSIWYG venue editor
Date: 04/2019 - 07/2022
Duties: I was tasked to design from ground up web based WYSIWZG using canvas, compatible with existing database structures, help design API Calls to minimize BE load, create project base code and implement desired functionality.
Technologies: React, Redux, JavaScript, UI/UX, Canvas, C#, .NET, MS-SQL, Azure

Denax a.s. – GoTicket – Ticket Look Editor – WYSIWYG editor for tickets
Date: 01/2018 - 07/2022
Duties: As a member of team, Design UI/UX, maintain code, design requested features.
Technologies: React, Redux, JavaScript, UI/UX, Azure

Denax a.s. – GoTicket – Public web - goticket.sk
Date: 08/2017 - 07/2022
Duties: This project I programed from beginning and had same duties as in Goticket Management Portal
Technologies: React, Redux, JavaScript, UI/UX, C#, .NET, MS-SQL, Azure

Denax a.s. – GoTicket – Management Portal – mp.goticket.sk
Date: 04/2017 – 07/2022
Duties: As a main front-end developer of this project, I am tasked with analyzation of requirements from clients, designing UI that would comply with existing design of pages, creates tasks for members of FE team, do code review for code they submit, help design API calls, find solution technological dept, help junior members of team with there's task, program harder task and fix bugs that need immediate attention.
Technologies: React, Redux, JavaScript, UI/UX, C#, .NET, MS-SQL, Azure

Denax a.s. – Ticketportal v2015 – Elastic Search integration
Date: 01/2017 – 03/2017
Duties: As a member of team, my responsibilities were to learn how Elastic Search works, design integration with existing backend calls, create indexes for 5 different languages, test created solution and integrate it existing page search on site Ticketportal and its mobile apps
Technologies: Elastic, C#, .NET, MS-SQL, JavaScript

Denax a.s. – Ticketportal v2015 – Refactoring mobile apps API
Date: 11/2016 – 12/2016
Duties: As a member of team, I would refactor buggy and badly written methods used for API call for communication between backend and mobile apps.
Technologies: C#, .NET, MS-SQL

AK Malovic – Automatic Document Generator
Date: 04/2016 – 08/2016
Duties: On my own I developed and implemented solution for automatic PDF generation from template filled out with customer information and saving on AWS S3.
Technologies: PHP, Yii2, MySQL, wkhtmltopdf, AWS S3

REDITUM Services – Backend – System
Date: 03/2016 – 04/2016
Duties: As a member of team, I would web design, development of web based tool for processing leads and applications for company offered services. This tool was based on bootstrap basic template integrated into Yii 2 advance template.
Technologies: PHP, Yii2, MySQL, JavaScript, jQuery

REDITUM Services – Frontend – Website
Date: 01/2016 – 04/2016
Duties: As a member of team, my responsibilities were web design, development, and integration with backend. This website was based on 3rd party bootstrap template that I integrated into Yii 2 basic template.
Technologies: PHP, Yii2, JavaScript, jQuery, Bootstrap

TRILA Finance – Backend – multiple extensions of BI module
Date: 11/2015 – 12/2015
Duties: As a member of team, my main responsibility was development multiple extensions to Business Intelligence module of system with focus on data visualization. The solution was realized by use of chart.js.
Technologies: PHP, Yii, MySQL, JavaScript, chart.js

TRILA Finance – VoIP Automatic Dialer
Date: 08/2015 – 10/2015
Duties: I developed windows program that used Zoiper API and backend calls for retrieving list of customer phone numbers selected by user. It main purpose was automatic phone number dialing from retrieved list and if possible automatic logging of call successfulness and call event.
Technologies: C#, VoIP, Zoiper API, PHP, Yii, MySQL
